</tbody>
</table>

This suggested watering schedule is intended to be a recommendation to conserve water. This schedule may need to be adjusted to meet your specific landscape's needs, as it assumes spray-head sprinklers, clay soil, minimal slope, and no rain, for landscapes in Costa Mesa and Newport Beach, California. Please see additional scheduling tips below.

**Plant Types**
- **Turfgrass**: Cool season turfgrasses such as bluegrass and fescue. Warm season turfgrasses such as St. Augustine, Bermuda, and kikuyu.
- **Traditional Shrubs & Trees**: This includes common garden plants like magnolias, palms, roses, calla lilies, philodendrons, and hibiscus.
- **California Friendly Shrubs & Trees**: This includes most CA Native plants and other common plants such as oaks, strawberry tree, agaves, sages, lavender, and succulents.

**Notes**
- If your timer has a "seasonal adjust" or "budget" feature, then you may alternatively program your timer with the July/August schedule, and then use the Season Adjust % to easily adjust your watering to match the seasons. You do not need to add/remove water days!
- The number of days per week.
- The recommended number of minutes to water which varies with the type of sprinklers used and the weather.
- **Rotating Sprinklers** - multiply the number of recommended minutes per cycle by 3. Example: 3 minutes x 3 = 9 minutes per cycle
- **Drip** - multiply the number of recommended minutes per cycle by 5. Example: 3 minutes x 5 = 15 minutes per cycle
